Businesses and stores can use messaging and other features to communicate and build mid-to-long-term relationships with users who friend their LINE official account.

- ✓ **Free to get started, then pay-as-you-go**  
Businesses can get started immediately with a fixed monthly fee starting from zero yen. Paid plans use a pay-as-you-go system, charging the monthly fee and then billing for additional messages sent. This provides flexibility for every type of budget and schedule.

### Ad delivery features (examples)

**Audience targeting (including lookalike targeting, etc.)**

Offers a diverse range of advertising options (including re-targeting and lookalike audiences,) that leverages "deemed attributes"\* based off of users' registered information on LINE and family services (e.g. age, gender, region) and their past behavior.

**Cost Per Friends**

Serves advertisements that aim to get new users to friend an official account. The natural flow from viewing the ad to friending means there is a higher chance of acquiring users who have a strong interest in the service/product. Fees are only incurred when a user friends an account.

**App engagement distribution**

Target ads to dormant users who have installed the app to encourage them to reactivate it. Since targeting is possible according to the user's in-app events, ads can be delivered to users who are more likely to lead to your objectives.

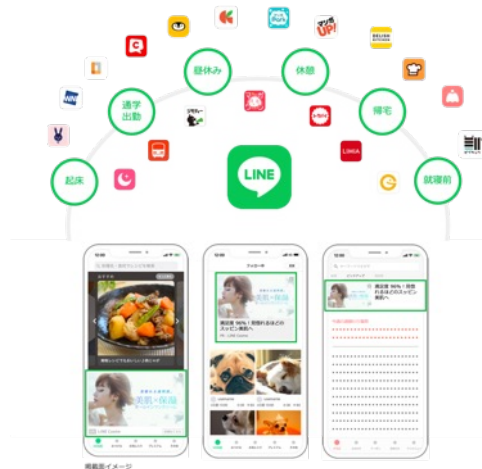

- Audience data is used as reference in the LINE Family of Services in a form that does not identify individuals, with "deemed attributes classified based on the gender, age, and area information registered by LINE users, the user's behavioral history, viewing trends of content within LINE, and advertising contact information within LINE, as well as the purchasing location where the actual purchase occurred" as "purchasing experience".The "deemed attributes" do not include operating systems.The "Deemed Attributes" are classified based on the gender, age and area information registered by LINE users on the LINE Family Service, as well as their behavioral history, browsing trends of contents on LINE, and advertising contact information within LINE. (Sensitive information such as phone numbers, e-mail addresses, address books, and talk content is not included in the information used for classification.) The estimation of attribute information is performed statistically and does not identify specific individuals. In addition, information that can identify specific individuals is not provided to third parties (advertisers, etc.).
